

2020 ITP Preliminary Model Information - Pass 0, Trial 1

The *Pass 0, Trial 1* powerflow models and supplemental data for the 2020 ITP assessment have been posted to [GlobalScape](#). The models are being built using PSS®E version 33.10. **Please provide feedback by Friday, July 20, 2018 through the [Models on Demand \(MOD\)](#) and the [SPP Request Management System \(RMS\)](#).**

As a reminder, the following models will be used for the 2020 ITP:

- 2022 Base Reliability Light Load, Summer, and Winter models
- 2025 Base Reliability Light Load, Summer, and Winter models
- 2030 Base Reliability Light Load, Summer, and Winter models

Modeling Contacts are requested to review the following:

- 1) Please verify topology is modeled appropriately
 - a. Please submit topology updates as PSS®E version 33 idev files through [RMS](#) or [MOD](#).
 - i. When submitting projects and profiles to MOD or post processing idevs, please use the following naming convention:
 1. Prefix the project/profile name with your owner/area number underscore company name underscore XXXX OR company name underscore XXXX if you do not have an area/owner number. For example:
 - a. **Project name:** 525_WFEC_Midwest-Franklin_Rebuild.prj or Nextera_Add_GenX.prj
 - b. **Profile name:** 659_BEPC_2017MDWGP4-18S or Nextera_2017MDWGP4-18S
 - ii. The file name should be separated by underscores instead of spaces (e.g., 525_Patent_Gate.prj)
 - iii. For NTC projects, include the UID or PID number at the end. For example, 659_Patent_Gate_UID300.prj or 659_Patent_Gate_UID300.idv

The 2019 series MDWG and 2020 ITP models are being built in parallel; however, the models will be posted separately. Please refer to the model build schedule located on the SPP corporate website under the MDWG page ([2020 ITP and 2019 Series MDWG Powerflow and Short Circuit Model Build](#)) for the different deadlines and milestones.

Information for obtaining the 2020 ITP models

In order to obtain access to these documents in [GlobalScape](#), stakeholders must provide SPP with a signed [confidentiality agreement](#). Instructions can be obtained by clicking on the link. Please submit these forms via [RMS](#) through the “Request GlobalScape Access” Quick Pick. After the executed confidentiality agreement is received, an account will be created for the requester on [GlobalScape](#) and an email with instructions for logging in will be sent to the requester. For those that already have a [GlobalScape](#) account, no additional action is necessary.

As a reminder, instructions for accessing the model information can be found on the SPP website [here](#).

These files can be found on [GlobalScape](#) under ITP → ITP → NCD (CEII, RSD) → NDA → 2020 ITP → 2020 ITP Powerflow Models → Pass 0 in the “[Trial 1](#)” folder.

FILE Information

| File Name | Description |
|------------------------------------|----------------------------|
| 2020 ITP Pass 0 T1 Raw V33.zip | Models in .RAW file format |
| 2020 ITP Pass 0 T1 Sav V33.zip | Models in .SAV file format |
| 2020_ITP_Pass_0_T1_Docuccheck.xlsx | SPP DocuCode |

Brief Description of Scenario Models:

The Base Reliability scenario models assume expected long-term firm transmission service usage levels. Wind and Solar resources are dispatched at each facility's latest 5-year average for the SPP coincident summer peak¹ in the Summer Peak models as well as the SPP coincident winter peak in the Winter Peak models. Wind resources are dispatched at 100% of the Long-term Firm Transmission Service amount in the Light Load models, while Solar is dispatched at its historical average, which is typically 0 MW during the Light Load timeframe.

In all Base Reliability models, the Wind and Solar are not to exceed each facility's firm service amount. In the event that 5 years of historical renewable resource output data is unavailable, SPP will follow the TWG-approved data replacement methodology.
