

## 2019 ITP Base Reliability (BR) Updated Final Models

The final version of the 2019 ITP BR Final models has been posted to GlobalScape. As a reminder, this pass incorporated the addition of SPP Board-approved NTC additions, NTC modifications, and NTC withdrawals and selected 9.3 model updates. The updated 2019 ITP Model Update Matrix, models, and associated transactions for these model updates have also been posted to GlobalScape. The posted documents reflect the associated model updates applied to the 2019 ITP models. The 2019 ITP Model Update Matrix Final presents each change from the previous posted pass of these models.

The models were built using PSS®E version 33.10. **The TWG will be requested to approve the updated 2019 ITP BR Final Models via separate email vote.**

As a reminder, the following models will be used for the 2019 ITP:

- 2021 Base Reliability Light Load, Summer, and Winter models
- 2024 Base Reliability Light Load, Summer, and Winter models
- 2029 Base Reliability Light Load, Summer, and Winter models

### Information for obtaining posted data:

These files can be found on GlobalScape under: ITP → ITP → NCD (CEII, RSD) → NDA → 2019 ITP → 2019 ITP Powerflow Models → [Final](#)

File Name	Description
2019_ITP_Model_Update Matrix_Final.xlsx	List of model updates for the 2019 ITP BR Final models
2019_ITP_BR_Final_Raw_v33.zip	2019 ITP BR Final models in .RAW file format
2019_ITP_BR_Final_Sav_v33.zip	2019 ITP BR Final models in .SAV file format
2019_ITP_BR_Final.xlsx	2019 ITP BR Final models SPP DocuCode

In order to obtain access to these documents in [GlobalScape](#), stakeholders must provide SPP with a signed [confidentiality agreement](#). Instructions can be obtained by clicking on the link. Please submit these forms via [RMS](#) through the “Request GlobalScape Access” Quick Pick. After the executed confidentiality agreement is received, an account will be created for the requester on [GlobalScape](#) and an email with instructions for logging in will be sent to the requester. For those that already have a [GlobalScape](#) account, no additional action is necessary.

As a reminder, instructions for requesting access to the model information can be found on the SPP website [here](#).

### Brief Description of Scenario Models:

The Base Reliability scenario models assume expected long-term firm transmission service usage levels. Wind and Solar resources are dispatched at each facility's latest 5-year average for the SPP coincident summer peak<sup>[1]</sup> in the Summer Peak models as well as the SPP coincident winter peak in the Winter Peak models. Wind

---

<sup>[1]</sup>SPP coincident summer peak equals the highest demand including transmission losses for energy measured over a one clock hour period.

resources are dispatched at 100% of the Long-term Firm Transmission Service amount in the Light Load models, while Solar is dispatched at its historical average, which is typically 0 MW during the Light Load timeframe.

In all Base Reliability models, the Wind and Solar are not to exceed each facility's firm service amount. In the event that 5 years of historical renewable resource output data is unavailable, SPP will follow the TWG-approved data replacement methodology.
