

2020 ITP Base Reliability Final Model Information

The Final ITP Base Reliability (BR) powerflow models and supplemental data for the 2020 ITP assessment have been posted to [GlobalScape](#). The models are being built using PSS®E version 33.11.

SPP will solicit a motion from TWG via email vote February 15, 2019 to approve the 2020 ITP Powerflow Models.

Please note the updated transaction and Master Tie Line (MTL) data was exported from the Engineering Data Submission Tool (EDST) for Final Pass.

As a reminder, the following models will be utilized in the 2020 ITP:

- 2022 Base Reliability Light Load, Summer, and Winter models
- 2025 Base Reliability Light Load, Summer, and Winter models
- 2030 Base Reliability Light Load, Summer, and Winter models

The 2019 series MDWG and 2020 ITP models are being built in parallel; however, the models will be posted separately. Please refer to the model build schedule located on the SPP corporate website under the MDWG page ([2020 ITP and 2019 Series MDWG Powerflow and Short Circuit Model Build](#)) for the different deadlines and milestones.

Information for obtaining the 2020 ITP models

In order to obtain access to these documents in [GlobalScape](#), stakeholders must provide SPP with a signed [confidentiality agreement](#). Instructions can be obtained by clicking on the link. Please submit these forms via [RMS](#) through the “Request GlobalScape Access” Quick Pick. After the executed confidentiality agreement is received, an account will be created for the requester on [GlobalScape](#) and an email with instructions for logging in will be sent to the requester. For those that already have a [GlobalScape](#) account, no additional action is necessary.

As a reminder, instructions for accessing the model information can be found on the SPP website [here](#).

These files can be found on [GlobalScape](#) under ITP → ITP → NCD (CEII, RSD) → NDA → 2020 ITP → 2020 ITP Powerflow Models in the “Final” folder.

FILE Information

File Name	Description
2020 ITP Final Raw V33.zip	Models in .RAW file format
2020 ITP Final Sav V33.zip	Models in .SAV file format
2020 ITP Final Docucheck.xlsx	SPP DocuCode
2020 ITP Final NTC Check.xlsx	Workbook comparing TAGIT NTC ratings vs model ratings
2020 ITP Final Dispatch Results.xlsx	Transactions, shortfall, and potential dispatch errors

Brief Description of Base Reliability Models:

The Base Reliability models assume expected long-term firm transmission service usage levels. Wind and Solar resources are dispatched at each facility's latest 5-year average for the SPP seasonal coincident peak in the seasonal peak models. Wind resources are dispatched at 100% of the Long-term Firm Transmission Service amount in the Light Load models, while Solar is dispatched at its historical average, which is typically 0 MW during the Light Load timeframe. In all Base Reliability models, the Wind and Solar are not to exceed each facility's firm service amount. In the event that 5 years of historical renewable resource output data is unavailable, SPP will follow the TWG-approved data replacement methodology.
