

2020 ITP Market Powerflow Models (MPM) Review and Reactive Device Settings Request

- **Action Required**

SPP has posted the initial 2020 ITP MPMs to [GlobalScape](#) for stakeholder review.

As a reminder, the following models will be utilized in the 2020 ITP:

- 2022 Future 1 Market Powerflow On-Peak and Off-Peak models
- 2025 Future 1 and Future 2 Market Powerflow On-Peak and Off-Peak models
- 2030 Future 1 and Future 2 Market Powerflow On-Peak and Off-Peak models

The summer On-Peak Base Reliability (BR) models for each study year were utilized as the starting models for the development of the MPMs. The PROMOD dispatch, load, phase-shifter angle, and DC tie setpoints for each On-Peak and Off-Peak hour were applied to these models.

The Off-Peak MPMs were updated with device control profiles from corresponding BR light load seasons. These models should be reviewed for reactive setting adjustment submittals to SPP per ITP Manual Section 2.3.2. Staff is requesting that stakeholders review and submit any changes to set points for:

- Capacitors
- Reactors
- Tap changers for transformers
- Remotely regulated buses
- Voltage schedules for generators and static VAR compensators (SVCs)
- DC tie and line parameters (other than MW SETVAL)
- Off-Peak (light load) power factors (QLOAD)

These adjustments will improve the response of the transmission system under system intact and contingency conditions, as well as provide confidence to SPP and stakeholders that potential violations are based on realistic system conditions prior to the reliability needs assessment. After all reactive device setting adjustments have been received, staff will apply the adjustments to the appropriate models before final posting for TWG approval.

SPP Staff will continue model review and will potentially make updates during the review period.

Docucheck and ACCC results will continue to be evaluated for potential model updates. It is recommended that a preliminary ACCC analysis be performed to identify potential voltage violations in order to help facilitate reactive setting adjustments.

- **Entities Required to Provide Feedback**

All interested stakeholders, TWG members

- **Due Date and Method of Submittal**

Please provide feedback by **Tuesday, January 14, 2020** via the [SPP Request Management System \(RMS\)](#), using Request Type “ITP Submittals” and Subtype 1 “Data Submission.” Staff will incorporate feedback and repost for review on January 17, 2020. SPP will solicit a vote for approval from TWG via email on Monday, January 27, 2020.
