## **AGENDA ITEM 2 – NAESB DISCUSSION – CURTAILMENT INFORMATION ON OASIS**

Mike Steigerwald (BPA) gave the group an update on the status of the NAESB curtailment posting on OASIS requirement, as well as discussion around next steps for consideration. Steigerwald informed the group that the relevant standards were drafted, pending an industry comment period, and pending final adoption of v0003.3 in a Final Order from FERC. Once the Order is issued, NAESB has requested nine months for implementation.

These standards apply to TPs who have adopted “Interconnection-wide congestion management procedures” and do not include curtailments issued via local TP or BA actions. The RCs are obligated to provide the necessary information to the TPs for posting on OASIS.

The group discussed next steps for the process, since FERC approval could be two years away. Yasser Bahbaz (SPPW) presented the Eastern Interconnection’s OASIS template and IDC element name mapping. Bahbaz took an action item to compare the IDC list to ECC and populate a similar spreadsheet with relevant ECC element names for review at a future meeting.

Mike Steigerwald (BPA) also suggested to the group to collaborate with Paul Sorenson prior to his retirement from OATI on the best way for implementation. Dede Subakti (RC West) identified a couple of items to address in the future:

- 1) Are there any unique TP requirements in the Western Interconnection versus the Eastern Interconnection?
- 2) Discussion with OATI is needed to identify if there are any major differences between interconnections/tools that may require a longer timeline, and
- 3) Who is responsible for informing TPs that are not a part of the ECCWG? Is that Mike or this group? What other industry groups should be informed?

Mike Steigerwald (BPA) also let the group know where to find the new standards on NAESB’s website. Once you are logged in, you can find the working document under NAESB – WEQ final actions, V3.3.
