

2024 ITP Needs Assessment Update

2024 ITP Needs Assessment Update

SPP has posted an updated version of the 2024 ITP Needs Assessment workbook on [GlobalScape](#).

The previous version inadvertently omitted needs in the *WINTER WEATHER – Overload* and *WINTER WEATHER – Voltage* tabs. A new column named *APPENDED 02/20/2024* has been added to the far right of the two winter weather tabs. The newly appended items are denoted by “YES” in the *APPENDED 02/20/2024* column. In total, 609 needs without potential staff mitigation reasons were added. Additional informational items were also added.

- 20 new thermal overload needs were added (12 unique monitored elements)
- 589 new voltage needs were added (351 unique monitored elements)

The previous version also contained an error in column header names. The updated workbook corrects column headers for V_CONT and V_MON in the *REALIABILITY Needs – Voltages*, *REALIABILITY Needs – P3 Voltages* and *WINTER WEATHER – Voltage* tabs.

2024 ITP DPP Window Information Updates

Due to the additional needs identified, the DPP window which opened at 12:00 a.m. CDT February 16, 2024, will be extended and remain open until March 21, 2024 at 11:59 p.m. CDT.
